DETAILED ACTION

Second Interference

The second interference between the same parties will not be declared upon an application not involved in an earlier interference for an invention defined by a count of the earlier interference. See § 1.658(c).

Note, claims 73-96 and 98 of the instant application corresponds to Count 1 of the earlier interference between US application No. 09/757,533 and US Patent 6,014,488.

Claims 73-96 and 98 are rejected as estopped on the merits by the applicant's loss in the interference against US Patent No. 6,014,488.

Claims 73-96 and 98 of the instant application corresponds to Count 1 of the earlier interference between US application No. 09/757,533 and US Patent 6,014,488. Also, a losing party is barred on the merits from seeking a claim that would have been anticipated or rendered obvious by the subject matter of the lost count. *In re Deckler*, 977 F.2d 1449, 24 USPQ2d 1448 (Fed. Cir. 1992); *Ex parte Tytgat*, 225 USPQ 907 (Bd. Pat. App. & Inter. 1985).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(g)(1) during the course of an interference conducted under section 135 or section 291, another inventor involved therein establishes, to the extent permitted in section 104, that before such person's invention thereof the invention was made by such other inventor and not abandoned, suppressed, or concealed, or (2) before such person's invention thereof, the invention was made in this country by another inventor who had not abandoned, suppressed, or concealed it. In determining priority of invention under this subsection, there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 73-96 and 98 are rejected under 35 U.S.C. 102(g)/103 based upon claims 1-38 of Patent No. 6,014,488 (Shustack).

The only difference in claim 73 and claim 1 of Shustack is that claim 73 recites that the strippability of the primary fiber coating is measured in a temperature range of from about 25° to about 125° C, whereas claim 1 of Shustack recites that the strippability of the primary coating is measured in a temperature range of from about 40° to about 200° C. The overlapped temperature range of about 40° to about 125°C renders no patentable distinction. Claim 78 and 80 adds limitations to specific value of adhesion test force, elongation to break, and tensile strength. Shustack claimed primary coating material would inherently have the same degree of strippability.
